Projected Budget

Project title: A comparative study of different information collection strategies of a diagnostic system.

Resources used:

- **Models**: DeepSeek V4 Flash 0731, GPT-5.6-Luna, Llama 4 Scout, Gemini Flash lite, and Qwen 3.8 max

Model costs:

- **DeepSeek V4 Flash 0731**
  - Input tokens: $0.03 (per million)
  - Output tokens: $0.80 (per million)
- **GPT-5.6-Luna**
  - Input tokens: $0.10 (per million)
  - Output tokens: $0.60 (per million)
- **Llama 4 Scout**
  - Input tokens: $0.10 (per million)
  - Output tokens: $0.30 (per million)
- **Gemini Flash lite 2.5**
  - Input tokens: $0.10 (per million)
  - Output tokens: $0.40 (per million)
- **Qwen 3.8 max**
  - Input tokens: $2.00 (per million)
  - Output tokens: $6.00 (per million)

Average case tokens:
Input: 1,352.77 tokens
Output: 591.28 tokens
(average ~2 LLM calls per case)

Experiments:

1. **Comparison**
   4 experiments each running on 272 cases.
2. **RareBench (**2,184 cases)
3. **DiagnosisArena (**915 cases)

(experiments are repeated 10 times to assess consistency)

Budget Calculation

1. **Comparison**
   - DeepSeek model x 4 experiments x 5 strategies x 272 cases x 10: ~$28.7 x 10 = $287
   - Other models x 1 experiment x 5 strategies x 272 cases x 10: ~$36.6 x 10 = $366
2. **RareBench**
   - Two strategies x 2,185 cases x 10 = $10.02 x 10 = $100.2
3. **DiagnosisArena**
   - Two strategies x 915 cases x 10 = $4.2 x 10 = $42

Total cost: $795.2 USD
